**Subject: OF4459 / WPH2808 Alternate Design**

Throughout 2018 you may notice visual differences on the subject filter model. The current OF4459/WPH2808 spin-on oil filter design shown below on the left features a flat threaded plate. The alternate design shown on the right features a contoured plate with the threaded extrusion facing outward. Also, less noticeable are the slightly larger flutes on the alternate design 14 wrench flutes versus 15 wrench flutes. If a cup wrench is used this would need to be taken into consideration. Current design uses Service Champ cap wrench 3862 or A251, the alternate design will use Service Champ cap wrench 3861 or A264.

Due to unprecedented demand, we will be allocating two U.S. manufacturing locations for this filter temporarily. There is no change in fit or function and the established alternate design meets all requirements for the vehicle applications.

Current Design

Alternate Design
